Description

## Summary

I was able to perform a major denial of service attack on the web application.

## URL

<http://sample-application-insecure.com/>

## Description

10 million requests were made from multiple IP's too the log caused the website to become unresponsive.

## Steps to reproduce

1. Stress test site with requests flood from multiple IPs
2. Wait for site to go down
3. No block in place

## Recommended fix

Use a Cloud proxy service such as Cloudflare or a web application firewall.
